Institutional repositories

Paradigm

Paradigm Repositories* help institutions preserve and share a wide range of research outputs through an open-source infrastructure Paradigm actively develops.

Manage

Institutional and data outputs in one environment

Preserve

Provide long-term access to scholarly and research materials

Share

Publications, theses, datasets, software and educational materials

*Built on InvenioRDM, originally developed at CERN.

Partner Press

Paradigm

Partner Press is a dedicated publishing environment built around a publisher's own program and brand.

Paradigm manages the technical infrastructure while the publisher retains control of its publications, editorial direction and scholarly relationships.

How the Partner Press model works

Publisher identity

Brand and publishing program remain clearly visible

Flexible infrastructure

Support for different content types, workflows and operational needs

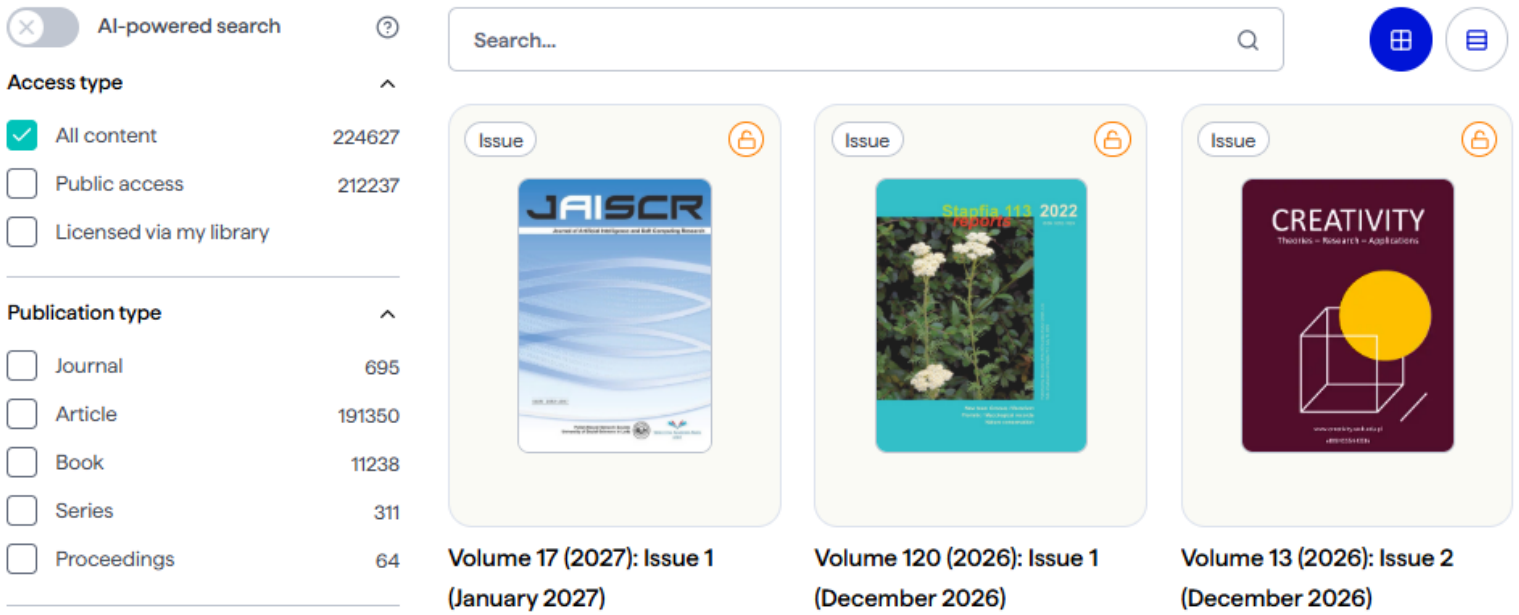

Platform management

Maintenance and ongoing development handled by Paradigm

reference-global.com

Paradigm

One platform for journals, books and proceedings

For librarians

A broad collection of Open Access content across publishers and disciplines

For publishers

Global distribution of scholarly publications

For researchers

Direct access to relevant research

Paradigm supports different routes to **Open Access** while helping scholarly communities retain their identity and long-term publishing goals.
